

INCIDENT EVIDENCE REPORT

NetShield

REPLAY / RESOLVED / HIGH

Incident 92d0839a-835c-44ee-81c1-423404c1eec5
Generated 2026-10-04 19:43:58 UTC

Executive assessment

Analyst resolution recorded; review supporting notes.

Same observed source/target, sensor/interface/VLAN and origin/run; activity gap <=300s. No device/person identity or causality asserted.

Observed scope	Value
Source → destination	10.77.0.2 → 10.77.0.10
Sensor / interface	local / fixture
Run	5903caf4-875a-42d5-99b1-b25cd1e99bf3
First / last observed	2023-11-14 22:13:20 UTC / 2023-11-14 22:13:20 UTC

Observed evidence

Vertical port scan indicator

NS-RECON-VERTICAL v2.0.0 / severity HIGH / confidence indicator / status RESOLVED

Initial SYNs from one source to distinct ports on one destination.

```
{"observed": 18, "samples": [8002, 8003, 8004, 8005, 8006, 8007, 8008, 8009, 8010, 8011, 8012, 8013, 8014, 8015, 8016, 8017], "source_attribution": "Packet addresses may be spoofed", "threshold": 15, "unit": "distinct ports", "window_seconds": 30}
```

Occurrences: 4

ATT&CK T1046: Network service probing; legitimate scanners may match.

Service enumeration pattern

NS-RECON-ENUM v2.0.0 / severity MEDIUM / confidence indicator / status RESOLVED

Repeated initial connections to multiple service ports; service identity unknown.

```
{"observed": 18, "samples": [8002, 8003, 8004, 8005, 8006, 8007, 8008, 8009, 8010, 8011, 8012, 8013, 8014, 8015, 8016, 8017], "source_attribution": "Packet addresses may be spoofed", "threshold": 10, "unit": "distinct ports", "window_seconds": 60}
```

Occurrences: 9

Response and verification

No verified live enforcement is present in this evidence snapshot.

10.77.0.2 / REMOVED / not_enforced / requested by local-demo / expiry 2026-10-04 19:44:58 UTC / authority dry run / scope Not verified

Analyst notes

2026-10-04 19:43:58 UTC / local-demo: Controlled replay validation completed. Dry-run decision retired manually. No kernel enforcement was attempted or verified.

Assessment and recommendations

Not classified by this template; consult attributable analyst notes.

Observed addresses: 10.77.0.10, 10.77.0.2

Confirm authorized scanning/automation and observation-point coverage.

Review exact rule threshold, related conversations and trusted service outcomes.

Use scoped expiring exceptions for explained benign activity; protect response infrastructure separately.

Verify kernel state and connectivity before concluding any live mitigation succeeded.

Coverage and limitations

Renderer: local ReportLab / template 2.0.0. No signed forensic chain of custody.

Network metadata indicators do not establish compromise or operator identity.

No payloads, credentials or decrypted HTTPS content are included.

Replay and isolated-lab evidence cannot authorize live firewall changes.

Historical records may have expired under retention policy; export is bounded.
